TEJ Linux Offline Kit

Printable Quick Start

https://andrewandrade.ca/tech-edu-resources/tej3-4/linux-operating-systems/offline-kit/

Download or copy the folder, extract the ZIP, then open START-HERE.html.

Keep the whole folder together. Hidden folders are part of Bashcrawl.

1. Choose an editable file

- **ODT:** best choice for LibreOffice Writer.
- **DOCX:** works in Microsoft Word and LibreOffice.
- **TXT:** use the answer sheet if no office program is installed.
- **PDF:** read or print it; do not use it as the editable submission.

2. Pick an activity

- **Terminal Quest:** inspect the computer and practise terminal commands.
- **Bashcrawl:** learn navigation by playing the included terminal game.
- **Xfce Appearance:** inspect and run the script, then explain your changes.

3. Work offline

Linux Mint and Mac terminal activities work without Internet. WSL, Termux, and iSH only work offline if they were installed earlier.

Check for LibreOffice Writer

```
libreoffice --version
```

If it is missing, use the TXT answer sheet. Do not install unknown software from the USB drive.

Start Bashcrawl

Use the file manager to copy the complete bashcrawl folder into Home > Games. Then run:

```
cd ~/Games/bashcrawl/entrance
```

```
cat scroll
```

4. Save now and submit when Internet returns

- **Name the file clearly:** include your name and the assignment title.
- **Keep evidence:** insert screenshots in the document or save them beside the TXT file.
- **Upload later:** submit the completed ODT, DOCX, or TXT file to Google Classroom.
- **Protect your privacy:** never record passwords, tokens, Wi-Fi credentials, or student numbers.
