

PERSONAL LOGO

Idea to SVG: sketch first, then rebuild in Photopea

Technology Commons | Port Credit Secondary School

Student Number: _____ Date: _____

1. Find two or three useful shapes

Start with your own paper drawing. Photograph or scan it, then circle only the shapes you might reuse. Do not trace every detail.

Paste, sketch, or describe the inspiration here. Circle two or three shapes.

2. Sketch three different simple marks

A. Initials

B. Shapes

C. Initials + one shape

3. Choose one

Circle: A B C Why is this the clearest idea?

4. Plan the build

List the layers you need: _____

Examples: SUN, MOUNTAIN, RIVER, INITIALS. Start with black shapes.

Next: compare your sketch with the worked example on page 2.
Then use the separate Photopea step-by-step guide to build your selected idea.

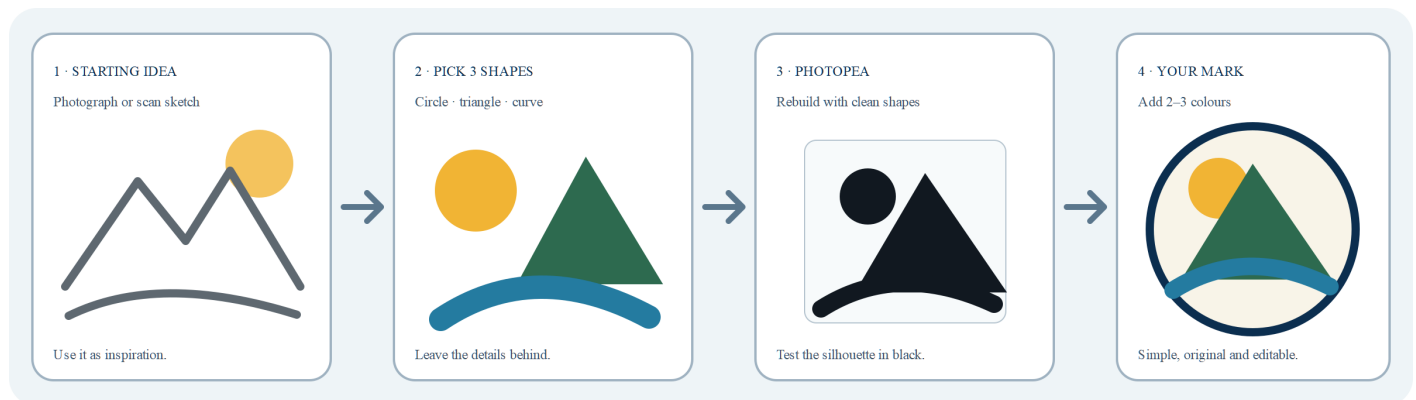

WORKED EXAMPLE

What a strong simplification looks like

Technology Commons | Port Credit Secondary School

Student Number: _____ Date: _____

Study the changes from the starting idea to the final mark. Use the same tests on your own design.

1. Keep the meaning

The sun, mountain, and river still communicate the original landscape idea.

2. Reduce the parts

The image is rebuilt with one circle, one triangle, and one strong curve.

3. Test in black

The silhouette remains clear without colour. That makes engraving possible.

4. Remove tiny details

Wide gaps and bold shapes remain readable when the logo is only 25 mm wide.

5. Use limited colour

Three colours separate the forms without making the mark complicated.

6. Keep it editable

Each part stays on its own named layer so size, spacing, and colour can change.

Analyze your selected sketch

Which two or three shapes carry the meaning? _____

What detail can you remove? _____

Will it still work in black at 25 mm? _____

Next: open the separate Photopea Step-by-Step Guide and build the mark.
