

PERSONAL LOGO

Idea to SVG: sketch first, then rebuild in Photopea

Technology Commons | Port Credit Secondary School

Student Number: _____ Date: _____

1. Find two or three useful shapes

Start with your own drawing or an approved AI-made image. Circle only the shapes you might reuse. Do not trace every detail.

Paste, sketch, or describe the inspiration here. Circle two or three shapes.

2. Sketch three different simple marks

A. Initials

B. Shapes

C. Initials + one shape

3. Choose one

Circle: A B C Why is this the clearest idea?

4. Plan the build

List the layers you need: _____

Examples: SUN, MOUNTAIN, RIVER, INITIALS. Start with black shapes.

Next: open Photopea and follow pages 2 and 3. Bring this page with you.

The finished mark should be simpler and more original than the starting image.

PHOTOPEA STEPS

Build the selected sketch: setup and first shapes

Technology Commons | Port Credit Secondary School

Student Number: _____ Date: _____

Complete each step in order. Keep the sketch beside you.

1

Create the file

Open Photopea. Select File > New. Set Width and Height to 1000 px. Choose Transparent, then Create.

2

Place the sketch

Select File > Open & Place. Choose a clear photo or scan of the sketch you circled on page 1.

3

Set the reference

In Layers, rename the placed image REFERENCE. Set Opacity to 30%. Select the lock icon.

4

Make the first layer

Select New Layer. Name it for the part you will draw, such as SUN, MOUNTAIN, or INITIALS.

5

Draw basic shapes

Press U. Choose a Shape tool. Set Fill to black and Stroke to none. Drag to draw the first shape.

6

Draw custom shapes

Press P for the Pen tool. Click for straight corners. Click and drag only when you need a curve. Close the path.

PHOTOPEA STEPS

Finish, test, and export the logo

Technology Commons | Port Credit Secondary School

Student Number: _____ Date: _____

7

Add initials

Press T. Choose a bold, readable sans-serif font. Keep the text editable while you test the idea.

8

Arrange the parts

Press V. Select a layer, then use Ctrl+T to move, resize, or rotate it. Hold Shift to keep proportions.

9

Protect your options

Duplicate a layer before changing it. Keep one idea per clearly named layer or group.

10

Run the black test

Hide REFERENCE by selecting its eye icon. The logo should still read clearly as one black silhouette.

11

Add simple colour

Use two or three colours at most. Keep strong contrast. Save a solid black version for engraving.

12

Save and export

Save the editable PSD. Select File > Export As > SVG. Export a transparent PNG for the name tag.

Final check

☐ clear at 25 mm

☐ no tiny gaps

☐ works in black

☐ PSD + SVG + PNG saved
